## The SDGs and Open Data

“... The UN’s Sustainable Development Goals set an ambitious agenda for progress on the world’s most challenging problems by 2030. To meet those goals, member states will need to draw upon all the resources at their disposal. **Open Data has the potential to be a universal resource to help achieve and measure the SDGs.** As countries around the world work to meet these goals, sharing Open Data and the methods for using it will accelerate progress and help to make the SDGs possible.”

Gurin, Manley and Ariss. 25.09.2015. **Sustainable Development Goals and Open Data.** (Online). Accessible: <https://blogs.worldbank.org/digital-development/sustainable-development-goals-and-open-data>

# Data = scholarly knowledge

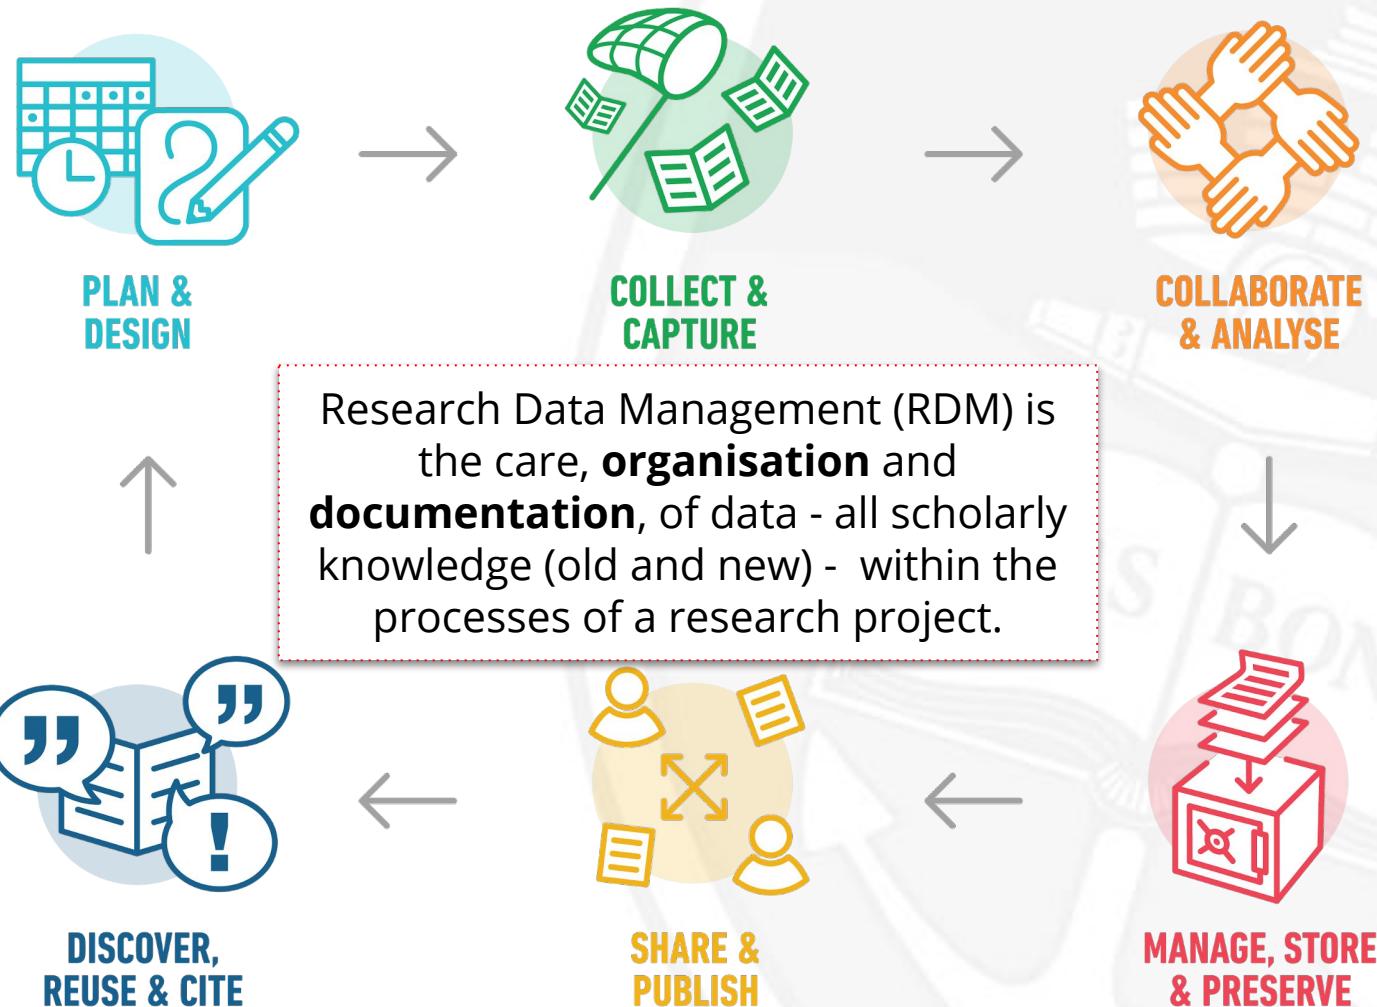

*'the factual records (...) used as primary sources for research, and that are commonly acceptable in the research community as necessary to validate research findings'*

A_Personal-texts-relating-to-archive  
B_Transcripts
```

Save

UCT example answer

[SAMPLE ANSWER] Raw data will be stored on a secure external harddrive accessible only by the data collector and the PI. Processed data, with identifiers removed, will be placed on the project's OneDrive account and shared with the full team, including external collaborators. We have adopted the Purdue University guide for file-naming. All data will be backed-up on monthly intervals to the secure external harddrive.

Guidance

Comments

UCT

Organising and naming your files according to a convention can make your dataset more easily understandable in the future. Jisc and the Association of College Research Libraries have guides on file-naming conventions.

Storing data files (including backups) exclusively on local harddrives may pose a risk of hardware failure, theft, or accidental damage. Consider backing up your data to other secure storage locations, such as the UCT G-Drive, ZivaHub, or off-site storage.

**Harvesting synergy from Sustainable Development Goal interactions (Preprint)**

Description: In combination, policies for sustainable development can work together and synergize. In so doing, the resulting impact of a strategic policy mix can be greater than the sum of the individual policies of its individual parts. That synergistic potential can be utilized to attain strategic objectives. This is the case when it comes to achieving the Sustainable Development Goals (SDGs) of the United Nations 2030 Agenda. However, identifying and quantifying these synergistic interactions is infeasible without a systematic approach. This preprint proposes a methodology to identify synergies between SDGs by analyzing their interactions in a complex system. The methodology is based on a multi-step process involving data collection, analysis, and modeling. The results show that synergies exist between most SDGs, and that they can be used to improve the overall impact of sustainable development policies. The methodology can be applied to other complex systems, such as climate change mitigation and adaptation, and can help to achieve the Sustainable Development Goals more effectively.

### What is the Climate Change & Sustainability Digital Library (CCSDL)?

This is a repository of Open Educational Resources (OER's) that focuses on teaching and learning about climate change. The leading purpose is to provide the teaching community (from primary to teacher educators) with relevant text and resources to enhance their teaching practice and courses. You can do general searches using main categories such as climate change topic, foregrounded approach and target audience. Each general category is then broken down into subtopics to help you find your areas of interest.

# ZivaHub quick guides

 ZivaHub  
Open Data UCT

Digital Library Services (DLS)  
Level 7, J.W. Jagger Library building  
[dls@uct.ac.za](mailto:dls@uct.ac.za)

## ZivaHub Quick Guide on Open & Closed Collaboration

ZivaHub, running on the [Figshare for Institutions<sup>1</sup>](#) platform, is ISO-certified<sup>2</sup> as a **trusted digital repository**. As such, it provides a **GDPR-compliant<sup>3</sup>** environment, meeting the e-privacy and data security regulations of the European Union. Once you are logged in to ZivaHub, you can **create a project** and invite collaborators to it, including researchers outside of UCT. You can also be invited to other researcher's projects to either view or contribute to their data. In short, the **Projects** tab is your pathway to collaboration on ZivaHub. Here, we will look in some detail at the two project types:

1. **Individual** project
2. **Group** project (*recommended*)

As the type **cannot be changed after creating a project**, a number of considerations should be made by the project creator when choosing the project type<sup>4</sup>:

1. Whose **storage** quota should be used - an individual or a UCT department?
2. Who will be the **owner** of the data once the project is completed?
3. Who will be **reviewing** items shared by non-UCT users?

This table presents a simple comparison between **Individual** and **Group** project types:

	Individual	Group ( <i>recommended</i> )
<b>Storage</b>	Everyone uses their own quota and account storage. For UCT users: 20GB, for non-UCT users with a standard figshare.com account: 5GB.	Submitter's quota will not be used, storage allocation comes directly from the project. <sup>5</sup>
<b>Ownership of data</b>	The individual who uploaded the data owns the data at all times. People take their data with them if they leave the project.	All work is stored on institutional storage and remains within the project space if people leave. After the departure of any team members, the project creator becomes the owner of the data item.
<b>Review</b>	Items published by users from outside the organisation don't have to go through review (if review is turned on for the group).	Items published by users from outside the organisation have to go through review (if review is turned on for the group).

<sup>1</sup> See: [figshare continues to focus on security and trust with award of ISO27001 certification](#)

<sup>2</sup> ISO 27001 Certification is a specification for an information-security-management-system (ISMS). An ISMS is a framework of procedures & policies that includes all physical, legal & technical controls involved in company information risk management processes, and was developed to 'provide a system for establishing, monitoring, implementing, operating, maintaining, reviewing, and improving an ISMS'.

<sup>3</sup> See: [https://gdpr.eu/what-is-gdpr/](#)

<sup>4</sup> At DLS, we recommend the creation of a **Data Management Plan (DMP)** to guide your decision-making process. To assist you with this, UCT hosts an instance of **DMPonline**, just click here: <https://dmponline.lib.uct.ac.za/> and follow the guidance provided online.

<sup>5</sup> The storage quota is assigned per faculty and by DLS. Project owners should contact [DLS](mailto:DLS@uct.ac.za) for further details. For projects working with large datasets (beyond 5GB per item) please contact ICTS Data Storage.
