# Evidence use ...

Table 3.1 Evidence use mechanisms

Mechanism	Description	Example of linked activity
Awareness (M1)	Building awareness of, and positive attitudes towards, EIDM.	<ul style="list-style-type: none"> <li>Social marketing of the norm to use evidence</li> <li>Awareness-raising campaigns</li> </ul>
Agree (M2)	Building mutual understanding and agreement on policy-relevant questions and the kind of evidence needed to answer them.	<ul style="list-style-type: none"> <li>Co-production approaches between researchers and government staff</li> <li>Steering committees</li> </ul>
Access (M3)	Providing communication of, and convenient access to, evidence.	<ul style="list-style-type: none"> <li>Knowledge repositories</li> <li>Communication campaigns and strategies</li> </ul>
Interact (M4)	Interaction between decision makers and researchers to build trusted relationships, collaborate and gain exposure to a different type of social influence.	<ul style="list-style-type: none"> <li>Knowledge brokers</li> <li>Networks and communities of practice</li> </ul>
Ability (M5)	Supporting decision makers in developing skills in accessing and making sense of evidence.	<ul style="list-style-type: none"> <li>Capacity-building (e.g. workshops and formal training courses)</li> <li>Mentoring programmes</li> </ul>
Institutionalising / formalising (M6)	Influencing decision-making structures and processes.	<ul style="list-style-type: none"> <li>Secondments</li> <li>Embedded support (e.g. knowledge brokers)</li> </ul>

- Policy actors: quickly and **easily identify, access and review** available research
- Broader community of policy actors (and wider public): **what evidence is being used to inform/justify decisions?**
- Interconnected nature of decision-making: **wider view of available research in adjacent policy domains**

FIGURE 2 KEY STEPS IN EVIDENCE MAPPING

### Step 1: Develop a policy narrative

The first step in conducting an evidence map is to develop the map's policy narrative. This evidence map is supposed to be used and enter existing and future policy debates. It is the policy custodian to champion the evidence integration in decision-making processes. This will require extensive stakeholder engagement.

The evidence map is integrated into wider governance structures and tools. It aims to provide a voice and political legitimacy. It is also crucial to ensure that the map will be relevant to relevant public sector officials to ensure the research framework and process align with their priorities. The policy narrative needs to be expressed in a framework, which defines the evidence base. An example of a policy-narrative-informed framework for urban settlements is included in Appendix 2.

### Step 2: Decide what constitutes policy-relevant evidence

Evidence mapping starts with a decision of what can be considered evidence in the given policy context. This decision will discuss what type of information, data, research, etc. is fit for the purpose of informing policy decisions. Having made this decision, transparent inclusion criteria

## First Step

Co-create policy narrative  
and what constitutes policy  
evidence

**Definition and mapping of policy through consultation, review of policy material**

**Framework of policy interventions (vertical) and outcomes (horizontal)**

# DATA EXTRACTION TOOL - DPME HSEB

Welcome to the data extraction tool for the DPME HSEB project. This tool includes four sections. Researchers must complete all four sections.

SECTION 1: ADMINISTRATIVE INFORMATION - Extraction and evidence meta-data

SECTION 2: INCLUSION - Check to make sure evidence fulfils our inclusion criteria

SECTION 3: EXTRACTION OF PICO DATA - Select PICO categories the evidence belongs to

SECTION 4: EXTRACTION OF FINDINGS DATA - Copy and paste key findings into this document

## SECTION 1: ADMINISTRATIVE INFORMATION

### 1.1 EXTRACTION INFORMATION

Person(s) extracting

Date of extraction

Day Month Year

### 3.3.3 Outcomes

*If the study is only an assessment of health system outcomes/ status then you will select one or more of these items (and not select any Interventions from the previous section)*

#### Quality

- ☐ Effectiveness
- ☐ Safety
- ☐ Responsiveness
- ☐ Timeliness
- ☐

#### Equity and universal coverage

- ☐ Access
- ☐ Services
- ☐ Financing
- ☐

#### Capability and accountability

- ☐ Care management and practice
- ☐ Social support and accountability
- ☐

#### Efficiency

- ☐ Technical
- ☐ Allocative
- ☐

### 3.3.2 Interventions

*If the study is only a design, modeling or assessment of a health system intervention itself then you will only select one or more of these items (and not select any Outcomes from the next section)*

#### Service delivery

- ☐ Integrated care incl. referrals
- ☐ Delivery models incl. communities, decentralisation
- ☐ Infrastructure and facilities
- ☐ Care mgmt. & protocols
- ☐ Demand/ utilisation of care
- ☐

#### Workforce

- ☐ HR policy & planning
- ☐ Training
- ☐ Recruitment and remuneration
- ☐ Roles and structure
- ☐ Performance management
- ☐ Advocacy, motivation and health
- ☐

#### Information

- ☐ Health system M&E/ indicators
- ☐ Disease surveillance systems
- ☐ IT applications & infrastructure
- ☐ IT & data standards, policies and governance
- ☐ IT skills
- ☐ Research and knowledge translation methods
- ☐

#### Medical products, vaccines, technology

- ☐ Procurement
- ☐ Supply chain and logistics
- ☐ Standards and quality assurance
- ☐ Safety mechanisms
- ☐ Use incl. guidelines and training
- ☐ Technology assessment
- ☐ Research and development
- ☐ Manufacturing
- ☐ Market intelligence
- ☐

## Schema for an Open Contracting Release

Each release provides data about a single contracting process at a particular point in time. Releases can be used to notify users of new tenders, awards, contracts and other updates. Releases may repeat or update information provided previously in this contracting process. One contracting process may have many releases. A 'record' of a contracting process follows the same structure as a release, but combines information from multiple points in time into a single summary.

### ocid \*

string

A globally unique identifier for this Open Contracting Process. Composed of an ocid prefix and an identifier for the contracting process. For more information see the [Open Contracting Identifier guidance](#)

### id \*

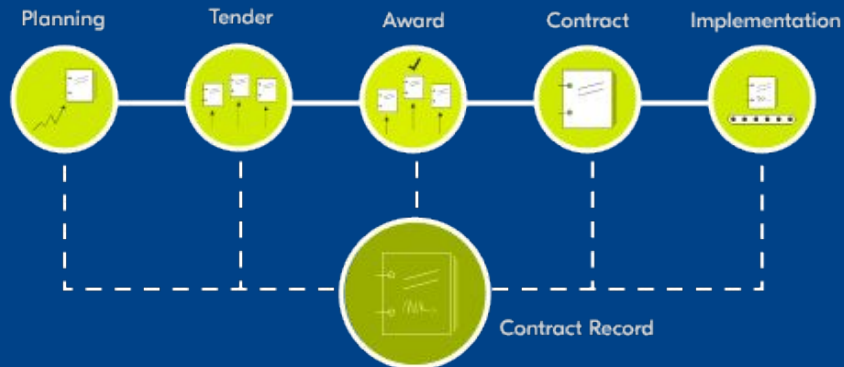

string

An identifier for this particular release of information. A release identifier must be unique within the scope of its related contracting process (defined by a common ocid). A release identifier must not contain the # character.

### date \*

string (format: date-time)

The date on which the information contained in the release was first recorded in, or published by, any system.

## awards

array [Award](#)

Information from the award phase of the contracting process. There can be more than one award per contracting process e.g. because the contract is split among different providers, or because it is a standing offer.

### Award

An award for the given procurement. There can be more than one award per contracting process e.g. because the contract is split among different providers, or because it is a standing offer.

### id \*

string, integer

The identifier for this award. It must be unique and must not change within the Open Contracting Process it is part of (defined by a single ocid). See the [identifier guidance](#) for further details.

### title

string

Award title

### description

string

Award description

### status

string chosen from: pending, active, cancelled, unsuccessful,

The current status of the award, from the closed [awardStatus](#) codelist.

### date

string (format: date-time)

The date of the contract award. This is usually the date on which a decision to award was made.

### value

[Value](#)

The total value of this award. In the case of a framework contract this may be the total estimated lifetime value, or maximum value, of the agreement. There may be more than one award per procurement. A negative value indicates that the award may involve payments from the supplier to the buyer (commonly used in concession contracts).

# Public interest decision-support

What information and influence pathways? → Supporting use

How can meta-data help? → Enables a process view

What government (meta-data) practices, standards and models? → Consistent, connected
